Electronic Shipping Tools Updates (2010)

October Updates to EST 2.0 include:

- **New – History screens now show Mailed On Behalf of Customer number!**
  The History screens in both Shipping and Mailing services in EST 2.0 now display the Mailed On Behalf of Customer number for each mailing and shipment

- **New – Mailing Templates can now be imported and exported!**
  You can now import and export your mailing templates through an .xml file. Perform an Import from the Templates folder by right-clicking on it. Perform an Export by right-clicking on the template you wish to export in the Templates folder.

- **Improved – The Depot Address has been added to the Unaddressed Admail Container Labels!**
  The Unaddressed Admail container labels now display the first line of the depot address above the depot name. There is no longer the need to look up depot addresses!

September Updates to EST 2.0 include:

- **New - EST Feedback!** Now you can offer your feedback to us directly from the Help menu in your EST 2.0 application. Click on the Help > EST Feedback link from your Shipping screen, and you will be taken to our new online form to submit your comments. Note : If you are having a technical issue with the application, or you need technical assistance, please continue to call the Canada Post helpdesk for immediate support.

- **New – Export your history to text files!** The extended file format export that was available in the Variably Connected Desktop (VCD) is now available in EST 2.0. Right click on your History folder and choose Export History. You now have the option in the Export dialog box to export to text files, which are the same file format as the extended files produced from the VCD. Available for both mailing and shipping users.

June Updates to EST 2.0 include:

- The ability to sort on column headers in many of the screens, including Shipment List, Mailing List, History, Address Book, and more...
- "Type ahead" ability in the Containers and Predefined Goods data entry lists
- Retention of last used Cost Centre in Shipping data entry screen
- Additional Mailing Plan functionality:
    - Ability to delete an uploaded mailing plan
    - Ability to bulk import mailing plans
    - Ability to bulk upload mailing plans to a mailing
